

FOOTBALL ANALYSIS

PROBLEM STATEMENT

- Analyze the distribution of yellow and red cards among players.
- Identify any patterns in team strategies based on the competition type.
- Determine if players who play more minutes tend to have higher or lower goal and assist numbers.
- Identify key players who have a significant impact on their team's performance.
- Investigate if certain referees are associated with more yellow or red cards.
- Explore whether managerial changes during a season have a significant impact on team performance.

OBJECTIVE

- ❖ Data have 26 columns (variables).
- ❖ There are 3568 rows (observations).
- ❖ Data have some missing information's.
- ❖ Build models to predict future outcomes, such as match results or player performance, based on historical data.
- ❖ Identify key players based on their contributions to the team.
- ❖ Evaluate referee performance by analyzing their involvement in various games.

Data Cleaning & Pre processing

❖ Checking for Null values

```
In [18]: # checking the number of missing values in each column of the dataframe  
df.isnull().sum().sort_values(ascending=True)
```

❖ Replace missing values

```
In [89]: x = df["away_club_position"].mean()  
df["away_club_position"].fillna(x, inplace = True)
```

```
In [93]: df["home_club_manager_name"].fillna(0, inplace = True)
```

❖ Dropping unwanted columns

```
In [84]: df=df.drop(['home_club_formation','away_club_formation'],axis=1) # this two column removed
```

Observations

- home_club_formation column is more then 90% missing values there.That reason drop the two columns.

❖ Displaying the dataset information

```
In [106]: print(df.info()) # data information
```

❖ Merge all files

```
In [68]: merged_df = pd.merge(df1, df2, on='game_id', suffixes=('_df1', '_df2'))  
merged_df1 = pd.merge(merged_df, df3, on='game_id', suffixes=('_merged', '_df3'))  
merged_df = pd.merge(merged_df, df4, on='game_id', suffixes=('_merged', '_df4'))  
merged_df = pd.merge(merged_df, df5, on='player_id', suffixes=('_merged', '_df5'))
```

❖ Display the names of all columns

```
In [105]: print(df.columns) # all columns name
```

THE TOP 10 FOOTBALL PLAYERS WITH THE MOST YELLOW CARDS

OBSERVATIONS:-

John Anthony Brooks is the player with the most yellow cards, while Kenny Saief is also in the top 10 for receiving yellow cards.

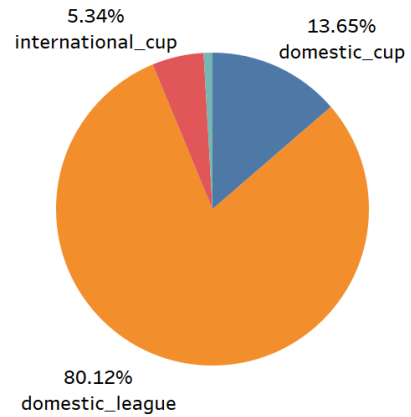

THE LEADING GOAL-SCORING CLUBS REVEALED

OBSERVATIONS:-

DASH BOARD

FOOT BALL ANALYSIS

Which clubs have consistently performed well in terms position in the league

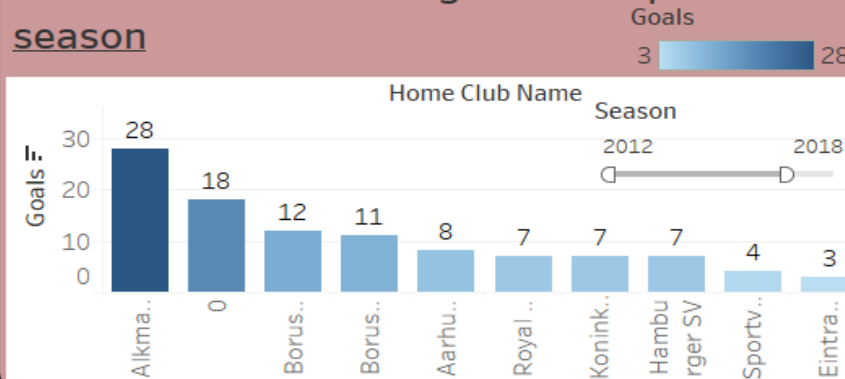

season wise top referee

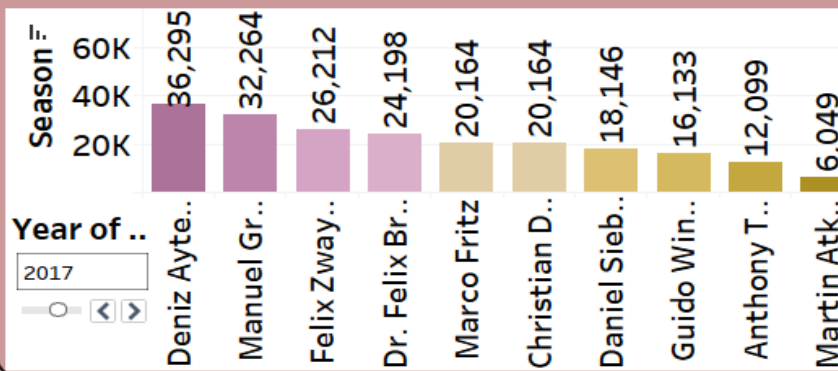

Competition type wise goals

clubs scored the most goals in a specific season

Tracking the Top Referees Year by Year

Distribution of Goals by Club

SUMMARY

- The football season during which the game took place.
- Number of goals scored by the home team.
- Position of the home team in the competition.
- Number of spectators or audience present at the game.
- Aggregate score in case of a two-legged match.

CONCLUSION

- Evaluate the outcome of each game through home club goals and away club goals.
- Identify players and their appearance details in a match, essential for player-focused analysis.
- Identify the managers of the home and away teams, which could influence team strategy and performance.
- Represents the date of the match, facilitating time-based insights.
- Provide the league position of the home and away teams, aiding in understanding team standings.
